H19 is a gene for a long noncoding RNA, found in humans and elsewhere.H19 has a role in the negative regulation (or limiting) of body weight and cell proliferation. This gene also has a role in the formation of some cancers and in the regulation of gene expression. .. The H19 gene is expressed exclusively on one parental allele in a phenomenon known as imprinting.

Mesoporous silica nanoparticles (MSNs) with unique properties have attracted increasing interest for biomedical applications. Particularly, MSNs have shown great potential to deliver poorly soluble drugs, anticancer agents, and therapeutic genes.

Mesoporous silica nanoparticles for drug and gene delivery

1. Introduction. Currently, the field of “epigenetics” has been an exciting and rapidly growing area of research, and a consensus definition of epigenetics: “an epigenetic trait is a stably inherited phenotype resulting from changes in a chromosome without alterations in the DNA sequence” was arrived in 2008 at a Cold Spring Harbor meeting (Berger et al., 2009).

Lin-28 homolog A is a protein that in humans is encoded by the LIN28 gene.. LIN28 encodes an RNA-binding protein that binds to and enhances the translation of the IGF-2 (insulin-like growth factor 2) mRNA. Lin28 binds to the let-7 pre-microRNA and blocks production of the mature let-7 microRNA in mouse embryonic stem cells. In pluripotent embryonal carcinoma cells, LIN28 is localized in the ...

CYTO-ID ® Autophagy Detection Kit measures autophagic vacuoles and monitors autophagic flux in lysosomally inhibited live cells using a novel dye that selectively labels accumulated autophagic vacuoles. The dye has been optimized through the identification of titratable functional moieties that allow for minimal staining of lysosomes while exhibiting bright fluorescence upon incorporation ...

Role of tumor microenvironment in tumorigenesis

Les micro-ARN (ou miARN) sont de courts acides ribonucléiques (ARN) simple-brin propres aux cellules eucaryotes. Ils possèdent en moyenne 22 nucléotides (en général de 21 à 24), soit beaucoup moins que les autres ARN.. Les miARN sont des régulateurs traductionnels capables d'extinction de l'expression d'un gène [1], [2] : leur appariement à une séquence complémentaire de l ...
