DNA vaccination is a technique for protecting against disease by injection with genetically engineered DNA so cells directly produce an antigen, producing a protective immunological response. DNA vaccines have potential advantages over conventional vaccines, including the ability to induce a wider range of immune response types.

DNA vaccination - Wikipedia

Methods. Immunogenicity and safety of this novel PER.C6®-based Sabin-IPV (sIPV) was assessed in rats and non-human primates (NHPs). NHPs received one of four different dose dilutions vaccine according to current human schedule (three prime-immunizations and one boost immunization).

An inactivated poliovirus vaccine using Sabin strains

The antibiotic-free, sucrose selectable marker, RNA-OUT, is now available for use in many types of plasmid-based vectors, including: Lenti vectors, retroviral, AAV, helper plasmids, sleeping beauty, DNA vaccines, therapeutic plasmids, mRNA vectors, CAR-T cell vectors, etc. RNA-OUT is compliant with regulatory agency preferred antibiotic-free plasmid backbones, and has already been approved and ...

Ebola | CIDRAP

Le virus Ebola est un virus enveloppé à ARN simple brin de polarité négative appartenant à la famille des Filoviridae. Il cause des fièvres hémorragiques souvent mortelles, principalement dans certaines régions d'Afrique. Il infecte principalement les primates non-humains et humains et pourrait éventuellement être utilisé dans des actes de bioterrorisme [1].
