The Preoperative Evaluation. Key Points to Start: *Remember, you can access Epic through the Ether website (ether.stanford.edu) whether on or off campus* *If there is no Pre-op done in Epic, do a chart biopsy, look up old records, and call the patient (if necessary) to gather this important information that is vital in developing a safe and effective anesthetic plan*

The Australian Commission on Safety and Quality in Health Care (ACSQHC) has developed National Safety and Quality Health Service (NSQHS) Standards. One of the ten standards focuses on blood and blood products (Standard 7). These standards are mandatory for hospitals and day procedure services from 1 January 2013.

National Standard for Blood and Blood Products Safety and

Deep venous thrombosis (DVT) is a manifestation of venous thromboembolism (VTE). Although most DVT is occult and resolves spontaneously without complication, death from DVT-associated massive pulmonary embolism (PE) causes as many as 300,000 deaths annually in the United States. [] See the image below.

Deep Venous Thrombosis (DVT): Practice Essentials

Wristbands containing patient information have been the standard method of identifying patients in hospitals for many years. There is evidence, however, that suggests that there are patient safety risks associated with the use of these patient identification bands.

Specification for a standard patient identification band

Among all types of medical errors, cases in which the wrong patient undergoes an invasive procedure are sufficiently distressing to warrant special attention.
